1 Executive Summary

This report summarizes the results of cross-browser and responsive testing performed on the web application. The objective was to ensure consistent user interface behavior, layout responsiveness, and functional stability across multiple browsers and screen sizes.

Testing was conducted on Chrome, Firefox, and Microsoft Edge across desktop, tablet, and mobile resolutions.

2 Test Scope

The following modules were included in testing:

- Homepage
- Navigation Menu
- Product Listing Page
- Product Detail Page
- Login Page
- Contact Page

Testing focus areas:

- UI consistency across browsers
- Responsive layout behavior
- Element alignment
- Image scaling
- Navigation functionality

3 Test Environment

- Browsers: Chrome, Firefox, Edge
- Operating System: Windows 11
- Devices: Desktop, Tablet, Mobile
- Testing Type: Manual UI Testing

4 Test Execution Summary

Metric	Count
Total Test Cases Executed	25
Passed Test Cases	17
Failed Test Cases	8
Browsers Tested	3
Devices Tested	3

5 Defect Summary

Bug ID	Description	Severity
BUG-01	Navbar misalignment in Firefox	Minor
BUG-02	Image overflow in mobile view	Major
BUG-03	Product grid misalignment in Firefox	Major
BUG-04	Product image overflow in mobile view	Major
BUG-05	Button size issue in mobile Firefox	Minor
BUG-06	Footer text misalignment in Firefox	Minor

6 Key Findings

- Chrome and Edge showed consistent UI behavior across all screen sizes.
- Firefox exhibited several UI alignment issues.
- Mobile view revealed responsiveness problems, especially image overflow.
- Navigation and core functionality remained stable across all browsers.

7 Risk Analysis

- UI inconsistencies may affect user experience across browsers.
- Responsive issues can impact usability on mobile devices.
- Layout misalignment may reduce visual quality and professionalism.

8 Recommendations

- Improve CSS handling for cross-browser compatibility
- Fix responsive breakpoints for mobile devices
- Ensure consistent UI alignment across all browsers
- Test UI components in Firefox thoroughly before release

9 Conclusion

The application demonstrates stable functionality across all tested browsers. However, several UI and responsive issues were identified, primarily in Firefox and mobile view.

Addressing these issues will significantly enhance user experience and ensure consistency across platforms.
